

### Repeatable, Reliable, Quality Wax Patterns

Yasui digital vacuum wax injector systems deliver a controlled and precise amount of wax into a vacuumed mold, eliminating air bubbles, finning, and shrinkage to create uniform wax patterns, significantly increasing productivity.

### Key Advantages

**Z Control Height:** Automatically adjusts mold clamp height for each specific mold.

**Double Injection:** After the initial injection of wax, a second injection occurs prior to solidification to eliminate model shrinkage.

**Assist Mode:** An operator assist feature that helps with complicated models exclusive to the Altima system. If a wax model had shrinkage, non-fill, finning, or air bubbles, the Altima will automatically adjust the settings to correct the wax model's error, resulting in a perfect wax every time.
